DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I in Paper No. 6 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Haddock (USP 6023471).

Haddock discloses a switch backplane comprising a plurality of switching controllers (Fig 1b, Ref 105-N) and plurality of packet buses, (Fig 1B, the links between REF 105 and 100), each of packet buses having a root interfacing with a different one of the switch controller and a

plurality of leaves interfacing with a plurality of the switch controllers wherein a plurality of switch controllers propagate packet data in parallel from the roots with which the switch controllers interface with leaves (Ref 105s are connected with the links, See Fig 1B).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haddock (USP 6023471) in view of the admitted prior arts (Fig 1).

Haddock fails to disclose the claimed invention. However, The admitted prior art claim line interfacing with a plurality of switch controllers and associated packet bus, wherein a switch controller transmits a claim signal on claim line upon identifying a packet propagated on the packet bus for capturing and a stall line having a root interface with a different one of the switch controller and a plurality of leaves interfacing with a plurality of the switch controllers and switch controller transmits a stall signal from the leaf to root upon identifying a congestion condition on packet bus (Page 1, line 10 to page 2, line 16).

Since, Haddock suggests the use of a plurality of packet buses lines for communicating between the forwarding devices. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to apply a teaching of claim and stall line as

disclosed by the admitted prior art into Haddock. The motivation would have been to improve the throughput of the backplane.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bronsstein (USP 5910954) discloses a network switch.

Frankish (USP 4985889) discloses a data packet switching.
